

Garrett Molle

Software Engineer

molle_g@yahoo.com | 440-653-7569 | [LinkedIn](#) | [Portfolio](#) | Columbus, OH

Professional Summary

Software Engineer with 2 years of experience building scalable full stack applications using Java, Spring Boot, React, and TypeScript in production environments. Experienced in developing REST APIs, building responsive user interfaces, and applying test driven development to deliver reliable systems. Currently contributing to AI model evaluation, prompt engineering, and improving software reliability for large language models.

Technical Skills

Languages & Frameworks: JavaScript, TypeScript, Java, Python, React, Next.js, Redux

Front End: HTML, CSS, Tailwind, Bootstrap

Back End & APIs: Node.js, Express, Spring Boot, REST APIs

Databases & Tools: SQL, Git, Docker, AWS, CI/CD, GitHub Actions

Testing: Jest, React Testing Library, Playwright, JUnit, TDD

Professional Experience

AI Generalist/Trainer, Handshake AI | Contract | Remote Nov 2025 – Present

- Evaluated and refined AI generated code in JavaScript, Java, and Python for correctness and best practices
- Designed structured prompts and grading criteria to improve large language model reliability and output quality

Production Operator, Abbott Nutrition | Columbus, OH June 2024 – Feb 2025

- Operated and maintained packaging equipment, meeting daily production targets and quality standards
- Recorded logs and coordinated with a team of 12 operators to ensure smooth production flow

Software Engineer, TEKsystems | Remote May 2022 – Apr 2023

- Designed and implemented RESTful APIs using Spring Boot and SQL to support core ecommerce workflows
- Built responsive frontend features with React and TypeScript integrating seamlessly with backend services
- Applied test driven development across frontend and backend systems reducing production regressions by 30 percent
- Optimized database schemas and SQL queries improving API response times and UI performance under load
- Deployed and maintained application updates using CI CD pipelines ensuring reliable production releases
- Automated course registration workflows using Power Apps and Power Automate reducing steps by 50 percent

Software Engineer Intern, TEKsystems | Remote Jan 2022 – Apr 2022

- Delivered frontend and backend features using React and Spring Boot contributing to active production applications
- Collaborated in an agile team participating in sprint planning, code reviews, and production deployments

Front End Developer Intern, Minority Programmers Association | Remote June 2021 – Sept 2021

- Built responsive front-end apps from wireframes using JavaScript, React, and CSS, improving user experience
- Developed new UI features and optimized interface responsiveness for smoother, faster user interaction
- Integrated backend APIs to provide dynamic, accurate, and real-time data across user-facing components

Projects

Pathfinding Visualizer [View Project](#) [View Code](#)

- Built an interactive React application visualizing graph traversal algorithms with real time animation and state control
- Implemented A star, Dijkstra, BFS, and DFS algorithms enabling configurable weights and obstacle simulation

Collaboration Board [View Project](#) [View Code](#)

- Developed a real time collaborative web application using Next.js supporting multi user drawing and editing
- Implemented live state synchronization ensuring consistent updates across connected clients

Education

Western Governors University - Bachelor of Science in Computer Science

February 2026
